

Positive Approach.

Delivering exceptional restaurant environments.

Contentment.

A rewarding restaurant experience.

Comfort.

Accurex is all about feeling good.

Accurex is focused on the special ventilation needs of restaurants and other food service establishments. We provide custom-engineered air control systems and related services with one aim in mind: to ensure comfort — in every sense of the word.

As the owner of a building or business, or as a representative of a design firm, you can take comfort in knowing that Accurex will deliver an integrated, balanced ventilation system that will perform exactly as designed — and save money by reducing energy and operating costs.

When Accurex coordinates your ventilation project, diners will be able to focus on each other, the service they're receiving and the delightful atmosphere and meals being provided. That means they're more likely to come back because they won't be distracted by uncomfortable drafts and temperatures, poor indoor air quality, annoying ventilation noise or uncontrolled humidity.

Accurex also can help you attract and retain the best restaurant employees with a comfortable and safe work environment, due to our efficient kitchen ventilation, effective airborne grease management and advanced fire-suppression systems.

All-around comfort is our product — made to order.

Full-course offering.

Creating comfortable atmospheres.

Accurex products and services reflect the latest advances in the industry. At our headquarter's testing facility, we are able to replicate your cooking environment to determine the most efficient airflow rates for your new construction or retrofit system.

When it comes to effective restaurant and commercial kitchen ventilation, "a la carte" is most assuredly **not** the way to go. Accurex believes in a full-course offering of products and services that mirror your project needs, matched and balanced for optimum performance. We understand the challenges of integrating kitchen, dining and maintenance operations. We'll make sure you receive convenient, reliable ventilation systems. Accurex can also verify correct installation and performance testing — and provide controls for airflow and quality.

The result: a "positive" building — that "breathes" and functions the way you expect it to.

Check, please.

Controlling energy costs.

Rising energy costs can dramatically impact any business's bottom line, especially restaurants which are among the largest commercial users of energy per square foot. The energy efficiency Accurex "builds into" your ventilation system can reduce future operating costs and ultimately contribute to higher profit margins! From airflow reduction designs, to variable-volume control systems and energy-efficient rooftop ventilators, Accurex can help you keep energy costs at a minimum — and your business more competitive.

Choice ingredients.

Our menu of quality products.

To ensure a top-performing, integrated system, Accurex offers a comprehensive product line featuring innovative designs, easy installation and maintenance, and cost-effective operation.

Exhaust Hoods – Our wide selection of styles, sizes, features and accessories, including UL 710 listed hoods can precisely match your functional and aesthetic requirements and enhance grease extraction for cleaner ducts and roofs.

Exhaust Fans & Ventilators – Durable, efficient models in various configurations to meet any airflow requirement.

Roof Top Make-Up Air Units – Models to satisfy applications ranging from non-tempered to packaged heating and cooling that convert 100% outside air to comfortable indoor temperatures and humidity levels year round. Accurex has the products to handle any volume demand or climate challenge.

Fire Suppression – Pre-engineered systems from the two leading manufacturers (Ansul, Amerex), with leak-tested factory piping and fully coordinated field hook-up and testing.

Utility Distribution Systems – Multiple gas, water and electrical hook-ups are contained in our convenient, single-unit, all stainless-steel Utility Distribution Systems that allow you to connect kitchen equipment quickly and easily—and reconfigure workflow as needed.

Configurable Control Panels – As an energy management center, the panel controls power to kitchen ventilation system equipment. Features include labeled connections, in-door wiring diagrams and aesthetic enclosures. For optimum energy efficiency, variable-volume, and/or dehumidification applications, Accurex can also provide a turnkey direct digital control system.

Accurex — your single source.

Great service!

From project start-up to building start-up.

Accurex is focused on being your “go to” company for all things related to ventilation. We complement our design and consultation services with full field and technical support “after the sale.” Our pledge is to listen to your expectations, to deliver on our promise and to earn your loyalty by making every future building experience positive for you and your customers.

Building Commissioning – From schematic design stage, through installation, start-up and testing, Accurex will take control to ensure that a new building begins its life cycle according to the design intent for increased energy efficiency, comfort, and indoor air quality. We also offer direct digital control systems that will help maintain these performance levels over time.

Retro-Commissioning – For existing buildings, Accurex has the ability to perform system diagnostic evaluations focusing on energy-using equipment and related controls, with the goals of reducing energy waste, identifying and fixing mechanical problems, and improving comfort and air quality.

Contractor Network – Accurex maintains relationships with reliable, qualified contractors who can service your system. We can recommend one of these providers to ensure system performance is maintained.

Training – We offer training at our corporate headquarters on all aspects of the design, operation and maintenance of the ventilation system. See your local representative for more details and other training options.

Worry-Free Support – If you encounter a problem with your system, our factory representatives, engineers and product specialists are ready to help with a quick resolution.
